WATER TECHNOLOGY SYSTEMS

A WILO COMPANY

## Sustainable and innovative for the future

For over 40 years, Steinhardt GmbH has been a specialist in the development and manufacture of systems for stormwater and wastewater treatment. The founding of our company in 1981 marked the beginning of the development of the first flow regulators for sewer drainage. In the meantime, flushing systems for tanks and sewers as well as screen systems and particle separators for solids retention are among our core products.

In addition, we serve another market segment with products for flood protection. Innovative special solutions according to customer-specific requirements and comprehensive services complement our portfolio.

Our products set standards in terms of functionality and quality. We have already received various awards for our innovative and patented product solutions. Energy-efficient operation and designs for long life cycles, in conjunction with the use of recyclable materials, are important aspects with regard to the ecological sustainability of our developments.

Steinhardt has been part of the Wilo Group since the beginning of 2021. Being part of the Group strengthens our company and also offers opportunities to exploit synergies in different areas.

For us, „**Made in Germany**“ stands for sustainability and certified quality.

Yours sincerely,

Ingo Mayer,  
Managing Director of Steinhardt GmbH

## Products for stormwater and wastewater treatment

As a sustainability-oriented company, we develop innovative products for the field of storm- and wastewater treatment. In this way, we contribute to the protection of our waters as an important component of the natural balance and support integral water management.

Our system components are mainly made of stainless steel and are therefore durable and low-maintenance. A large number of Steinhardt products are designed for operation without external energy, through the targeted use of hydropower, which means that running operating costs in plant systems can be significantly reduced. At the same time, the operator receives a high level of operational reliability due to the self-sufficient functionality of our proven systems.

For decades, customers from all over the world have been relying in our products from the areas of:

- Flow control
- Tank and sewer flushing
- Solids retention and fine particle separation (SS63)
- Sewer network management
- Shut-off technology and backwater protection
- EI&C technology

## Products for flood protection

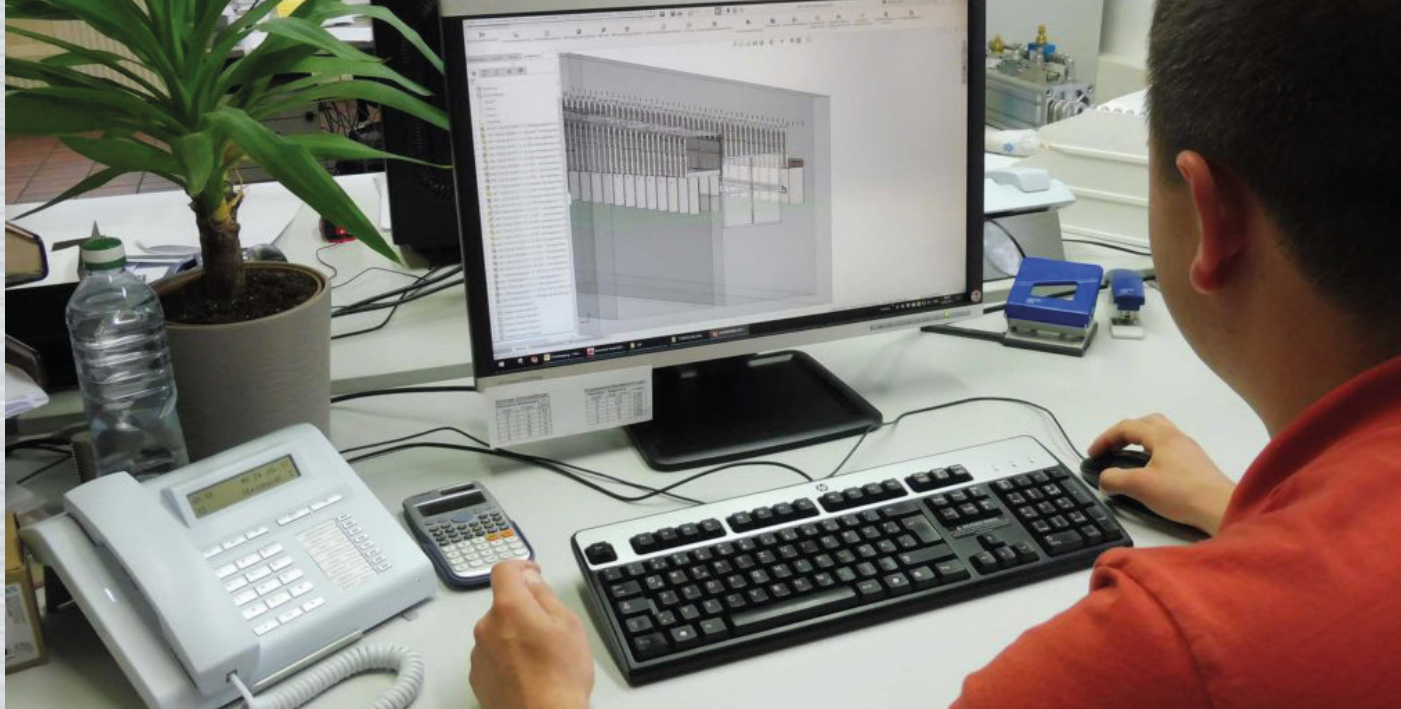

Due to climate change, the frequency and intensity of heavy rain events tend to increase. In general, this increases the risks of uncontrolled surface runoff and flooding even in catchments that have not been acutely flood-prone so far.

Technical and structural precautions to avert flood hazards are an important component of integrated flood protection concepts, along with other, largely precautionary, measures. Thus, technical protection systems are increasingly being considered in the municipal as well as in the commercial and private sectors.

We offer certified products for object and line protection as well as special solutions that are tailored to the specific needs of our customers.

Flow control systems specially developed for large flood retention basins form another product segment in the field of flood protection. Systems that operate without external energy ensure maximum operational safety and provide reliable protection for downstream users by precise flow limitation.

## Our service makes the difference

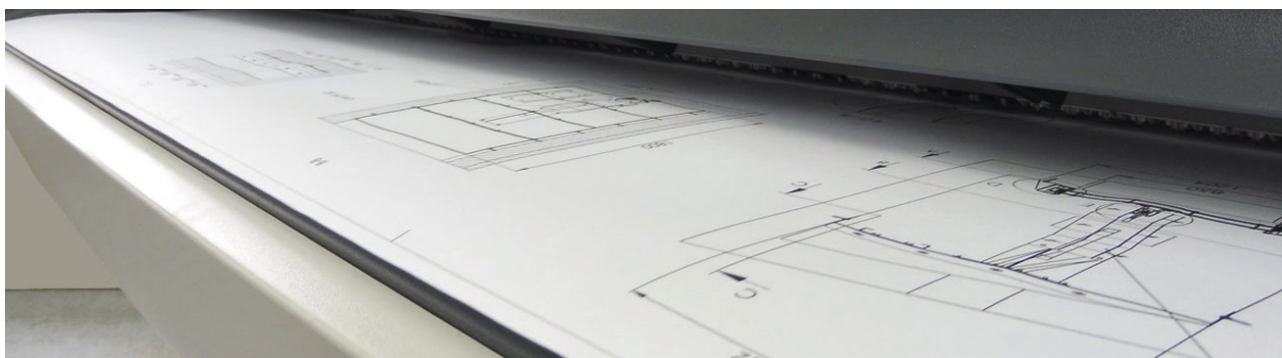

Our development team combines the fields of civil engineering, mechanical engineering and EI&C technology. Together we develop innovative and sustainable solutions that are individually tailored to your requirements.

Our service begins with consultation on almost all water management issues. We offer you expert advice and planning assistance, also directly on site. In addition, we take care of your plant systems. Our specialists or certified partners carry out maintenance as required to

ensure the long-term and safe operation of your systems.

We are always looking to the future. For the development of innovative products, we participate in research projects in cooperation with universities and other industrial companies at home and abroad. In this way, we follow the approach of always keeping our finger on the pulse of time with our products and system solutions.

## Recruitment of employees

We currently employ around 50 people at our company headquarters. In addition, we have an international sales structure with partner companies abroad.

**This means that we are networked worldwide.**

In China, we have a joint venture company with state-of-the-art production facilities in order to be able to adapt our system solutions to the Chinese market flexibly and with the same high production quality.

We are always looking for new professionals to join our team and become part of Steinhardt. Please have a look at our career page.
